

Name:

Do something

*Green*

Green things  
can be found  
anywhere.  
From animals  
to trees, there  
are plenty of  
green things to  
see.

Green is the color of life.  
When things in nature  
are green they are alive.

My favorite green things:

---

---

---

---

---

The sun makes green things come  
alive by giving them energy.

This is called  
photosynthesis.

In order for photosynthesis to happen, green things need water, sunshine, and air.

This is the key to making green things green! However, green things must be patient because photosynthesis can take a very long time.

Green things are  
pretty to see and  
make our world  
bright.

Plus, dinosaurs love  
green things, too!

Green things are good for you and your body. Like plants, you get energy from eating green things. Try to eat at least 3 green things a day!

My favorite green things to eat:

---

---

---

---

Keeping our world green is important and we can all lend a hand in keeping the world green. You can help keep our world green, too!

Help keep our world green by:

---

Planting green things

Recycling paper and  
plastics when you are  
done using them

Picking up litter or  
trash

Green things make  
the world beautiful. A  
world without green  
is a boring world.
